## BIO-SOLID INJECTOR

**THE HUSKY BIO-SOLID INJECTOR ENHANCES THE PUBLIC, REGULATORY AND AGRICULTURAL ACCEPTABILITY OF BIOSOLIDS, MANURE AND VISCOUS FERTILIZER LAND APPLICATION BY AVOIDING OFFSITE NUISANCE ODOURS AND RUN-OFF POTENTIAL**

Tires 30.5 x 32R  
Axle 6" Spindles  
Size 3000 USG  
Horse Power Recommended 200  
Vacuum Unit Rotary Lob Style

All Figures Are Approximate, Limited Warranty (3Months For Custom Operators), No Warranty On Sand Bedding.  
For Full Details and Exact Figures, Please Confirm With Husky. 1-800-349-1122

Comparison of Nasal Ranger odour unit readings obtained in 2004 for surface applied and direct injected sewage biosolids

August 30, 2010

The City of Toronto have been working with Terratec Environmental on their dewatered biosolids injection system for the past six years and it has helped Toronto maximize the amount of biosolids that is land applied.

The City's Ashbridges Bay Wastewater Treatment Plant produces dewatered biosolids at approximately 28% Total Solids content from high speed centrifuges. This biosolids injection system has considerably reduced odours during spreading and thereby significantly improved public relations with neighbours surrounding the land application sites.

Due to the effectiveness of the biosolids injection system, the Ministry of Environment now allows reduction in separation distances to homes and residential areas. The injection system provides farmers with uniform application of nutrients on their agricultural fields.

Sincerely,

Frank Quarisa, P. Eng., MBA  
Director  
Wastewater Treatment

**PERMITS COMPLETE COVERAGE OF FIELD BY REDUCING SEPARATION DISTANCES AND REDUCES THE AMOUNT OF BIOSOLIDS LANDFILLED WHICH HAS CONSIDERABLE ECONOMIC AND ENVIRONMENTAL COSTS**

**ENABLES FARMERS TO REPLACE EXPENSIVE COMMERCIAL FERTILIZERS WITH NUTRIENT AND ORGANICALLY RICH BIOSOLIDS**
